October 29th, 2026

Accomplishments Since Last Report

- Completed frontend integration of OCR confidence scores into the existing document workspace. Users can now view the confidence score for individual lines of extracted text and enable or disable automatic highlighting of lines with low confidence scores.

Scheduled Tasks by Next Report

- Test and perform QA on the text extraction confidence score functionality.
- Research Hugging Face summarization models and determine how to integrate a suitable model into the existing RAG pipeline.
- Define citation criteria and implement a mock clickable citation link.

Risks, Concerns, or Problems

- Delayed progress on Text Extraction meaning shifting more future work
- The learning curve associated with Hugging Face and potential additional implementation work may require more time than anticipated and affect the project timeline.
