October 15th, 2026

Accomplishments Since Last Report:

- Researched Tesseract OCR confidence scoring (via pytesseract) and compiled documentation
- Stored confidence scores in indexed Elasticsearch documents
- Built a prototype popover displaying confidence scores on click

Scheduled Tasks by Next Report:

- Implement automatic highlighting of low-confidence text
- Test and QA confidence score functionality for Text Extraction
- Research DocChat implementation and its information retrieval process
- Define citation format for DocChat

Risks, Concerns, or Problems:

- Low-confidence threshold criteria are not yet defined, which blocks the highlighting logic
- UX/UI feedback from attorneys is needed to validate the design
